SKILLS

TECHNICAL SKILLS

- MATLAB & Simulink
- Circuit Design & Analysis
- Arduino & Embedded Systems
- Power Electronics
- Welding

SOFT SKILLS

- Teamwork
- Time Management
- Communication
- Problem Solving
- Leadership

LANGUAGES

- Arabic
- English

REFERENCE

- Personal references are available upon request

PROFILE

Highly motivated senior Electrical Engineering student at the University of Bahrain with strong academic performance and hands-on experience in embedded systems, power electronics, and control applications. Demonstrated ability to design, simulate, and implement engineering solutions including motor control systems, sensor-based measurement systems, and AC-DC conversion circuits. Electrical Engineer with a strong interest in power electronics and industrial systems, committed to developing innovative and practical engineering solutions.

EDUCATION

Bachelor of Science in Electrical Engineering 2022 - Sep 2026

University of Bahrain

GPA: 3.25 / 4.0

Al-Hidaya Secondary School

2019 - 2022

Major: Chemistry and Biology Accumulative GPA: 97.7%

PROJECTS

AI-Assisted Smart Car Battery Management System | Senior Project (May 2026)

- Designed and implemented an Arduino-based battery monitoring and protection system with automatic load management, current leakage detection, and backup battery jump-start functionality.
- Developed an IoT dashboard for real-time battery monitoring, remote control, and system status visualization.
- Developed machine learning models for battery SOH prediction.

Elevator using Type E Chopper Circuit (December 2025)

- Built an Arduino-controlled elevator using a Type E chopper circuit and DC motor.
- Developed 3D models using Tinkercad and implemented a functional prototype.
- Used an ultrasonic sensor for position measurement to ensure accurate movement based on programmed distances (3cm).

Reverse Parking Car Sensor (January 2025)

- Developed a reverse parking assistance system using Arduino Nano and ultrasonic sensor
- Performed hardware integration including soldering connections to Arduino Nano
- Assembled and tested the circuit using a breadboard for reliable operation

Traffic Light System (December 2023)

- Implemented a traffic light control system using Arduino UNO and ultrasonic sensor
- Programmed object detection logic with a 5-second delay before triggering countdown
- Simulated and tested the circuit using Tinkercad prior to implementation

EXTRACURRICULARS

- Organized and supported multiple university Academic Day events related to Electrical Engineering, contributing to planning, coordination, and successful execution.
- Led the Traditional Heritage Team and participated in multiple cultural and traditional events creating the traditional Madeed.
- Pursued and received certifications in my hobby of dieting and working-out.

WORK EXPERIENCE

Freelance & Part-Time Roles (various Locations)

- Worked in food trucks and customer service environments
- Developed strong communication and sales skills through customer interaction
- Increased sales by over 20% by creating and promoting effective advertisements
- Gained experience working both independently and within a team
