Core Competencies

- Team Collaboration
- Leadership & Ownership
- Technical Communication
- Time Management
- Analytical Thinking
- Safety Awareness

Languages

- Arabic
- English

PROFESSIONAL PROFILE

A recent Electrical Engineering graduate with a strong academic record (GPA: 3.81/4.00) and practical industry experience gained through an internship at Amazon Web Services (AWS). Equipped with a solid foundation in electrical engineering and eager to apply technical knowledge to real-world challenges while continuously developing professional and technical skills. Demonstrates strong analytical thinking, adaptability, and a commitment to growth, seeking opportunities to contribute effectively within a dynamic engineering environment.

EDUCATION

Bachelor of Science in Electrical Engineering 2022 - 2026 University of Bahrain

- Awarded first-choice scholarship for studying electrical engineering.
- Currently in the last semester, with expected graduation in June 2026.

Al-Hidaya Al-Khalifia Boys school 2019 - 2022 Chemistry and Biology Major

- GPA: 98.9%
- Member of the student council
- Part of the traditional heritage team
- Learned to craft heritage fishing cages (Gargoor) and contributed to selling them at various heritage exhibitions.

Samaheej Primary and Intermediate Boys School

- score: 99%
- Actively participated in various competitions within and outside the school.
- Awarded the grand prize for outstanding performance in school competition.

WORK EXPERIENCE

Amazon Web Services (AWS) June 2025 – September 2025 Engineering Operations Technician Intern – Data Center Engineering Operations (DCEO)

- Supported operations and maintenance of critical electrical and mechanical infrastructure in a high-availability data center environment.
- Participated in major infrastructure activities including medium-voltage maintenance and live load transfer operations.
- Contributed to scheduled fire protection system preventive maintenance (multi-year cycle activity).
- Assisted in infrastructure event response to support system stability and SLA-driven operations.
- Supported Permit-to-Work (PTW) processes and adhered to site safety procedures during maintenance activities.
- Developed and presented a CRAH unit troubleshooting reference, mapping component-level fault impact and proposing operational improvements.

Programming Languages

- C++
- Matlab
- Simulink
- Tinkercad

Technical skills

- Soldering
- circuit implementation
- Precise handling of small wires and components

Hobbies & Interests

- Fishing
- Competitive Video Games
- Volleyball
- Soccer
- table tennis
- Crypto trading

PROJECTS

- **AI-Assisted Smart Car Battery System (May 2026)**
 - Developed an AI-assisted smart car battery management system using Arduino UNO R4 WiFi, sensors, relays, and Blynk IoT integration.
 - Implemented embedded control logic for battery monitoring, load control, and automated jump-assist operation.
 - Applied Python-based machine learning models using NASA battery aging data for battery State of Health (SOH) prediction.
- **DC Motor Elevator Control System (December 2025)**
 - Built a DC motor control system using a Type E chopper circuit.
 - Implemented PID control to improve position accuracy.
 - Developed and tested a working prototype using Tinkercad and hardware integration.
- **Smart Garage Door Controller (February 2025)**
 - Installed and connected a control circuit to manage the power system.
 - Synchronized the control circuit with the network for remote configuration.
 - Integrated the system with a mobile application and manual switch (dual control).
- **AC to DC converter using voltage regulator (November 2024)**
 - Designed and implemented an AC–DC conversion circuit using rectifier and LM317 regulator.
 - Performed no-load and short-circuit testing to evaluate performance.
 - Achieved adjustable and stable DC output with thermal protection.
- **Smart Traffic Light System (December 2023)**
 - Developed a traffic light system using an Arduino UNO R3, LEDs, and an ultrasonic sensor.
 - Programmed the system to detect stationary objects for 5 seconds before initiating a countdown.
 - Simulated and tested the project using Tinkercad.
 - Applied hardware-software integration to demonstrate Arduino’s potential in automation and control.

EXTRACURRICULAR ACTIVITIES

- **University Activities – College of Engineering, University of Bahrain**

Contributed to organizing and coordinating Electrical Engineering department events and exhibitions. Supported event planning and execution to ensure smooth and successful delivery.
- **Back-to-School Event – Amazon (During Internship)**

Participated and assisted in the Back-to-School event.
- **Sales Assistant – Family-Owned Fishing Supplies Shop**

Assisted customers in selecting appropriate products based on their needs. Managed daily sales transactions and supported shop operations.
